Summary

Innovative Full-Stack .NET Developer with 5+ years of experience delivering scalable, secure, and high-performing web solutions across diverse projects. Expertise in front-end and back-end development, system architecture, RESTful API development using Entity Framework and LINQ, and database optimization. Known for writing clean, maintainable code and driving efficient development practices to deliver impactful digital experiences.

Technical Skills

Programming Languages: C#, JavaScript (ES6+), SQL
Frameworks & Back-End: ASP.NET Core, ASP.NET MVC, ASP.NET Web API, RESTful APIs, Entity Framework Core, Entity Framework, LINQ, CQRS, Dependency Injection
Front-End: React.js, TypeScript, HTML5, CSS3, Bootstrap
Databases: Microsoft SQL Server, T-SQL, Stored Procedures, Views, Functions, Triggers, Query Optimization
Cloud: Microsoft Azure (App Services, Azure SQL Database, Azure Storage, Azure DevOps)
Authentication & Security: JWT Authentication, ASP.NET Identity, Role-Based Authorization
AI Tools Agentic AI: Claude AI, GitHub Copilot, AI-Assisted Development, Code Generation, Code Review, Debugging, Refactoring, Solution Design, Prompt Engineering, Agentic AI, Autonomous Workflows
UI Components: RDLC Reports
Testing: Selenium, Unit Testing
Software Engineering: Object-Oriented Programming (OOP), SOLID Principles, Design Patterns, Data Structures & Algorithms, Agile/Scrum

Experience

Momentum Pvt. Ltd.(Formerly Organicut Fresh Pvt, Ltd.) Sep 2026 - Present
SDE-1 *Noida, Sec-142, UP*

- Developing and maintaining scalable web applications using ASP.NET, MVC, Web API, C#, and SQL, with a focus on performance, maintainability, and clean code.
- Designed and implemented RESTful Web APIs and backend services to support business-critical application workflows and seamless integration with frontend systems.
- Optimized database operations by improving SQL queries, stored procedures, and data-access logic to enhance application performance and responsiveness.
- Applied Clean Architecture and established software design principles to build modular, testable, and maintainable application components.
- Worked with both Code-First and Database-First development approaches based on project requirements, business workflows, and existing database architecture.
- Collaborated with frontend developers, QA engineers, and project stakeholders to troubleshoot issues, implement features, and deliver reliable solutions within project timelines.

Intellisoft Technologies Sep 2021 - Aug 2026
Software Developer *Noida, UP*

- Spearheaded process improvements that increased project delivery efficiency by 40% and shortened development cycle times by 20%, delivering projects faster and with higher quality.
- Optimized complex SQL queries and back-end logic to deliver a 20% boost in database performance and a 25% overall increase in system responsiveness.
- Engineered scalable, maintainable solutions using ASP.NET, MVC, Web API, and C#, leveraging Clean Architecture, Code-First, and Database-First approaches to meet diverse client needs.
- Championed best coding practices and code reviews to maintain high-quality standards across the team.
- Mentored and trained interns, leading to a 30% improvement in their technical skills, confidence, and contribution to project success.
- Collaborated cross-functionally with front-end developers, QA teams, and project managers to ensure seamless integration and on-time delivery.

Projects

Sonora Construction | *.NET Core MVC, C#, Entity Framework, SQL Server, SyncFusion, AJAX, JavaScript, RDLC, SMTP, QuickBooks*

- Migrated a legacy MS Access system to a fully modernized .NET Core MVC application using Database-First approach and SQL Server stored procedures, improving maintainability and scalability.
- Consolidated multiple websites into a single multi-tenant platform, enhancing efficiency and delivering a unified user experience.
- Implemented role-based authentication and authorization, along with full dependency injection to enable cleaner, testable code.
- Integrated SYNCFUSION UI components to accelerate frontend development, reducing UI development time and cost by 35% using pre-built controls (grids, dropdowns).
- Developed and scheduled RDLC reports for printable, dynamic reporting directly within the application.
- Built an SMTP-based email notification system for transactional alerts and system communication.
- Created a custom QuickBooks integration console to sync timesheet data directly from Sonora Construction to QuickBooks, streamlining payroll workflows.
- Improved user experience & performance by 40% through AJAX-based seamless rendering and UI responsiveness.
- Integrated external APIs to sync daily equipment and job data, enhancing automation and accuracy across systems.

eco On Site (Smart Waste Monitoring System) | *ASP.NET Core Web API, Entity Framework, SQL Server, Flutter, React*

- Designed and developed secure RESTful APIs using ASP.NET Core Web API and Entity Framework to power a full-stack waste collection platform supporting a Flutter mobile app and React admin dashboard.
- Implemented JWT authentication and Role-Based Access Control (RBAC) to secure API endpoints and manage access across mobile and web clients.
- Built real-time collection tracking endpoints to log and update waste pickup status across late, missed, and successful collection events.
- Developed backend logic and data models to support analytics dashboards, aggregating collection event data to surface actionable operational insights.
- Optimized database schema and queries in SQL Server to efficiently handle collection event logging and reporting at scale.

Bar-Patrol | *c#,.NET Core Web API,React, SQL Server, Azure, SendGrid, CQRS,Claude AI* Live Site

- Developed secure RESTful APIs with authentication, role-based authorization, advanced filtering, and custom middleware using .NET Core and C#.
- Optimized data access with SQL Server stored procedures, reducing query latency by 40% for faster response times.
- Applied the CQRS (Command Query Responsibility Segregation) pattern to separate read and write operations, improving maintainability and scalability.
- Leveraged Claude AI for AI-assisted development, including code generation, debugging, code review, refactoring, and solution design across the application.
- Used Claude AI to analyze complex application requirements and C/.NET implementations, accelerating development and improving code quality and maintainability.
- Explored Agentic AI concepts to design smarter development workflows, automate repetitive engineering tasks, and improve developer productivity.
- Deployed the application on Azure for high availability and integrated SendGrid for reliable transactional email delivery.

BullDog | *C#, Console Application, SQL Server, Selenium, Salesforce API, Windows Services*

- Built a console application in C# to automate web scraping from Redfin and Redfin Agent websites using Selenium, extracting real estate data and agent profiles.
- Developed a Windows Service scheduler to run the scraping engine at predefined time intervals for continuous data updates.
- Parsed and transformed scraped data, then pushed it to Salesforce using the Salesforce REST API, enabling seamless CRM integration.
- Toread and transformed data in SQL Server for logging, reporting, and backup.
- Improved data pipeline reliability and reduced manual effort through full automation of the data collection and sync process.

Education

B.Tech (Computer Science & Engineering), Bundelkhand University, CGPA— 7.5/10.0 2017 - 2021
Intermediate, Board Of High and Intermediate Education (U.P) ,Percentage—79% March-2016
High School, Board Of High and Intermediate Education (U.P), Percentage—85% March-2014
